## Work Completed:

- Tuesday:
  - Reviewed progress on the MySQL database
  - Weekly meeting with business mentor to discuss whether our current XML implementation was incorrect (using XML to build the GUI rather than using it to store user data)
- Thursday:
  - Met with module leader to discuss the technical requirements of the assignment to clarify how we should be using XML. Outcome was that we can use it to build GUI, but it also has to still store XML
- Saturday:
  - Looked into alternative methods for reading/writing to XML so that we would be able to store user data in XML. Looked at StAX API.
